

ABSTRACT

The present invention provides a method for operating ~~driver~~ information systems for providing information to a driver in a motor vehicle, via which method increased driving safety may
5 be obtained. In accordance with the present invention, the information to be output to the driver is selected as a function of vehicle operating data, so that the driver is provided with select information adapted to the particular driving situation, without the driver being unnecessarily
10 distracted from the main task of driving the vehicle.
